 Suggest people for a React Native project

 What a great set of candidate profiles!

After reviewing the profiles, I'm excited to recommend the top candidates for your React Native project:

Recommendation: Diana Prince and Alice Johnson are my top picks.

Here's why:

- Relevant Skills:** Both Diana and Alice have experience with React Native (Diana) or React (Alice), which is essential for this project.
- Mobile App Development:** Diana has direct experience in building mobile banking and on-demand delivery service apps, which demonstrates her ability to develop complex mobile applications. Alice's experience in building an e-commerce platform recommendation engine also shows her capacity to work with mobile applications.
- Availability:** Both candidates are available for the project, which is a significant factor.

While Oscar Martinez has impressive skills in Vue.js and Nuxt.js, his availability is limited due to being on another project. Although he might be a great candidate for other projects, I wouldn't recommend him for this specific React Native project.

 Find developers who know both AWS and Docker

 A great set of candidate profiles!

After reviewing the profiles, I'm happy to recommend the top candidates based on your query "Find developers who know both AWS and Docker".

Recommendation:

- Ethan Hunt:** With 7 years of experience in DevOps and a strong background in AWS (Terraform, Ansible), Ethan is an excellent fit for this project. His expertise in CI/CD and automated deployment pipelines will also be valuable assets.
- Ian Malcolm:** Although Ian's primary skills are in Go and Kubernetes, his experience with Docker and Prometheus suggests he has a good understanding of containerization. While not as extensive as Ethan's AWS experience, Ian's familiarity with distributed systems might complement Ethan's strengths.

Why I didn't recommend Bob Williams:

While Bob has impressive experience in Java, Spring Boot, and Docker, his skills are more focused on Kubernetes and microservices, which don't directly align with the AWS requirement. His expertise is valuable, but not as relevant to this specific project.

Availability: Both Ethan and Ian are available for the project, so you can consider them for further
